Project: College Course Management System

1. Overview

The College Course Management System is a simple software application designed to manage college courses and student enrollments efficiently. The system helps store, update, and retrieve information related to courses, students, and course registrations. It reduces manual record keeping and improves accuracy and accessibility of data.

2. Introduction

In colleges, managing course information and student registrations manually can be difficult and time-consuming. Paper-based systems often lead to data redundancy, errors, and difficulty in updating records.

The College Course Management System provides a computerized solution that allows administrators to manage courses and students easily. This system is suitable for beginners and uses basic programming and database concepts.

3. Problem Statement

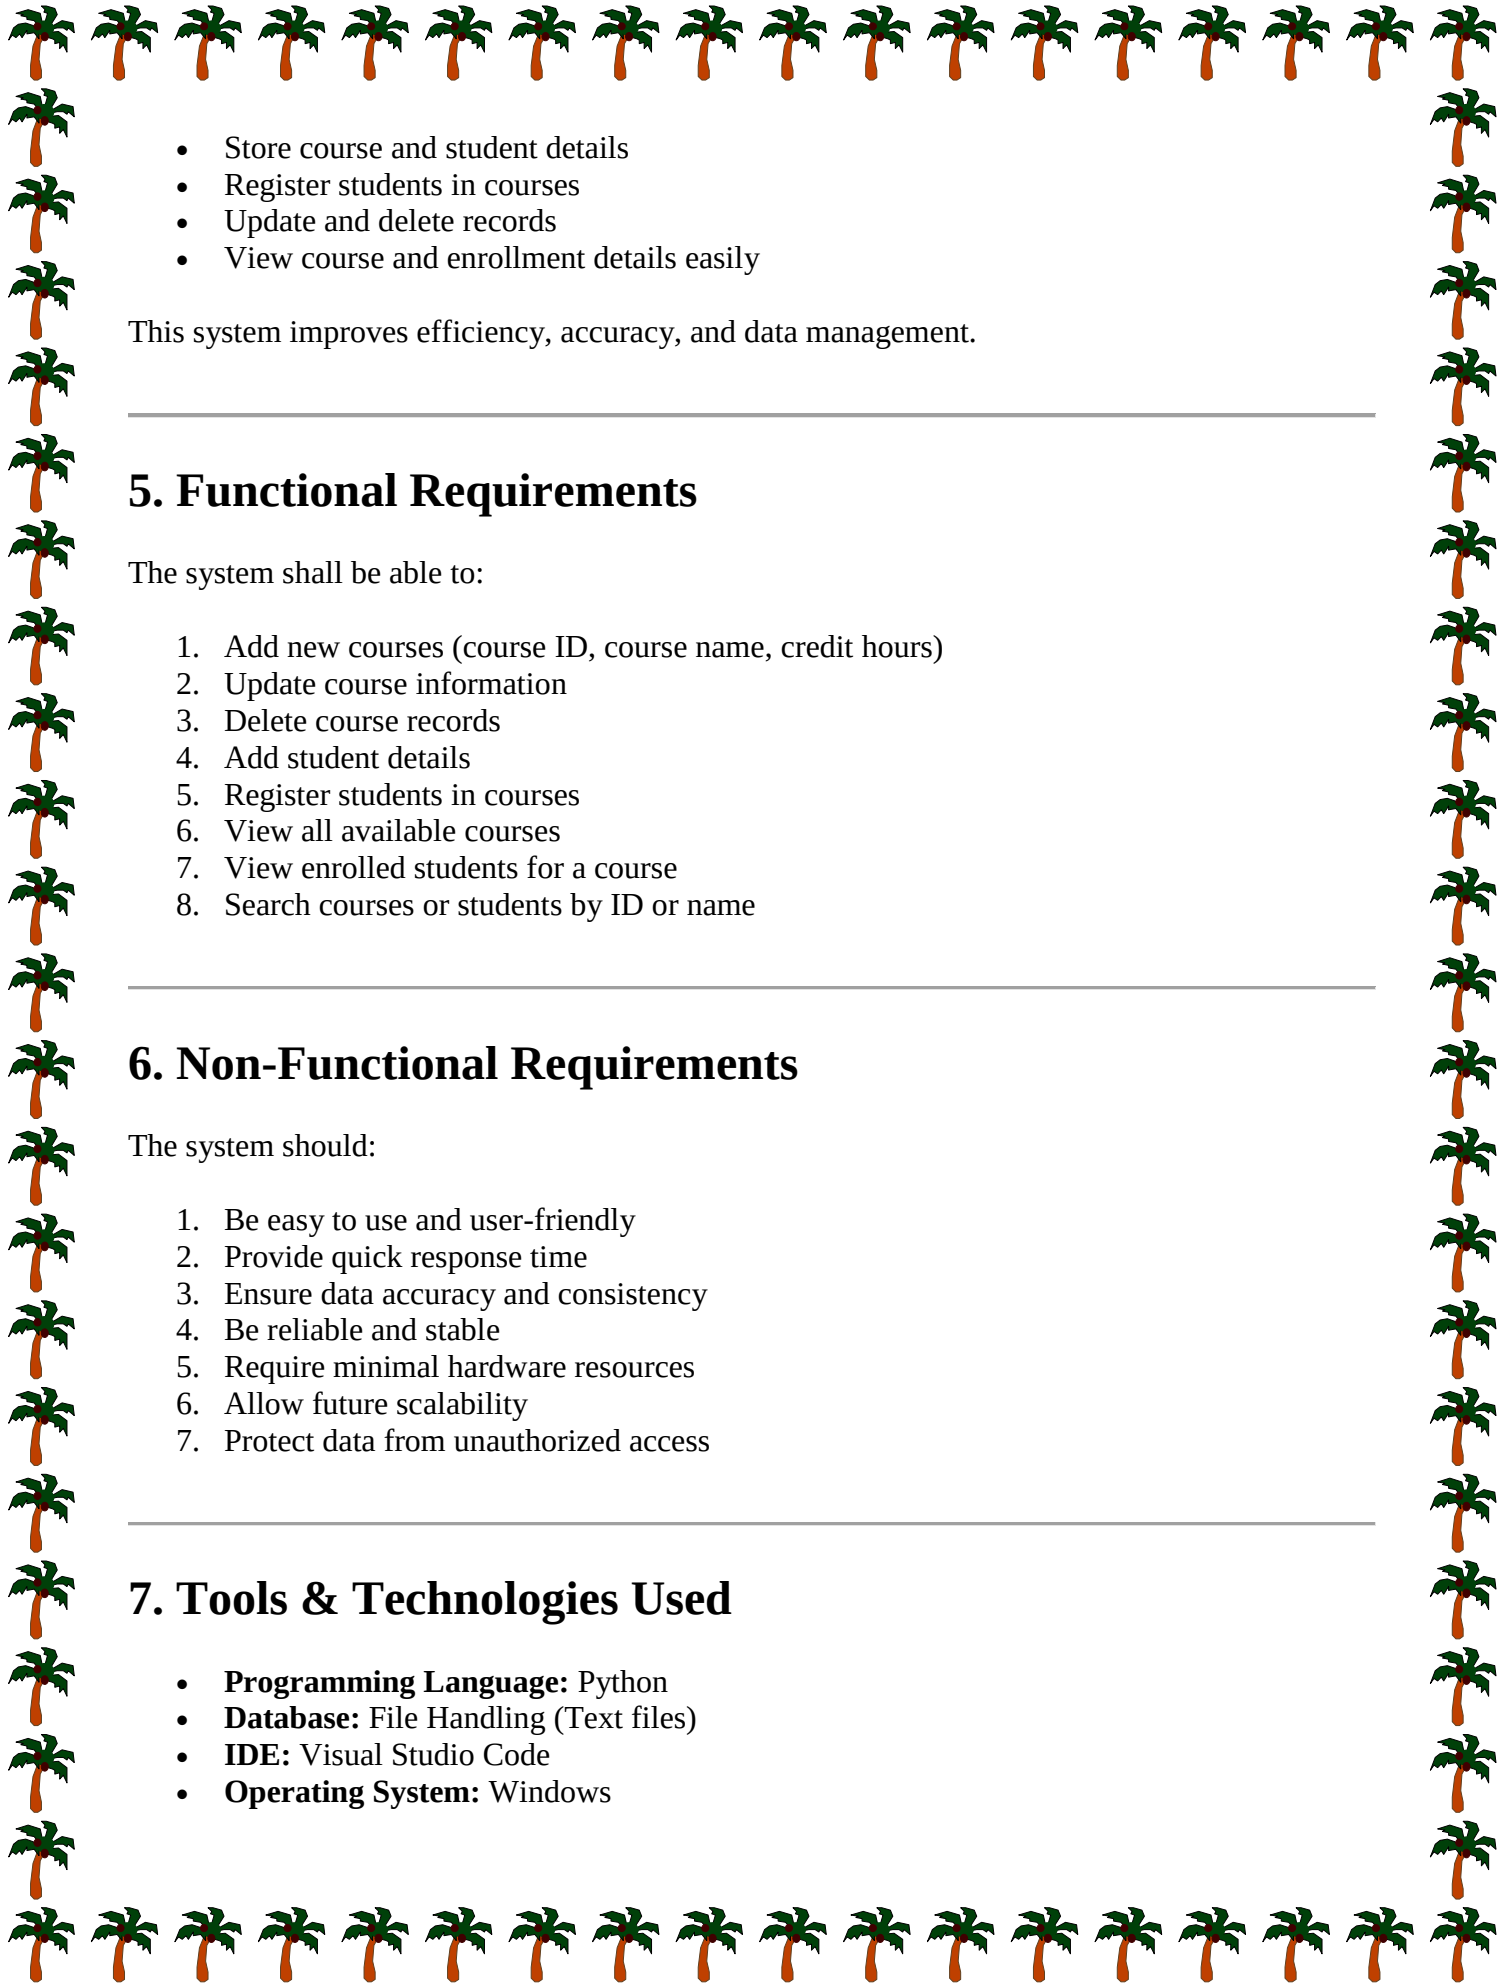

Manual college course management systems face the following problems:

- Difficulty in maintaining course records
- Time-consuming student course registration
- Errors in data entry
- Lack of proper course tracking
- Inefficient data retrieval

These issues reduce efficiency and increase administrative workload.

4. Proposed Solution

The proposed system automates the process of managing college courses and student enrollments. It provides a user-friendly interface to:

- 
- Store course and student details
 - Register students in courses
 - Update and delete records
 - View course and enrollment details easily

This system improves efficiency, accuracy, and data management.

5. Functional Requirements

The system shall be able to:

1. Add new courses (course ID, course name, credit hours)
 2. Update course information
 3. Delete course records
 4. Add student details
 5. Register students in courses
 6. View all available courses
 7. View enrolled students for a course
 8. Search courses or students by ID or name
-

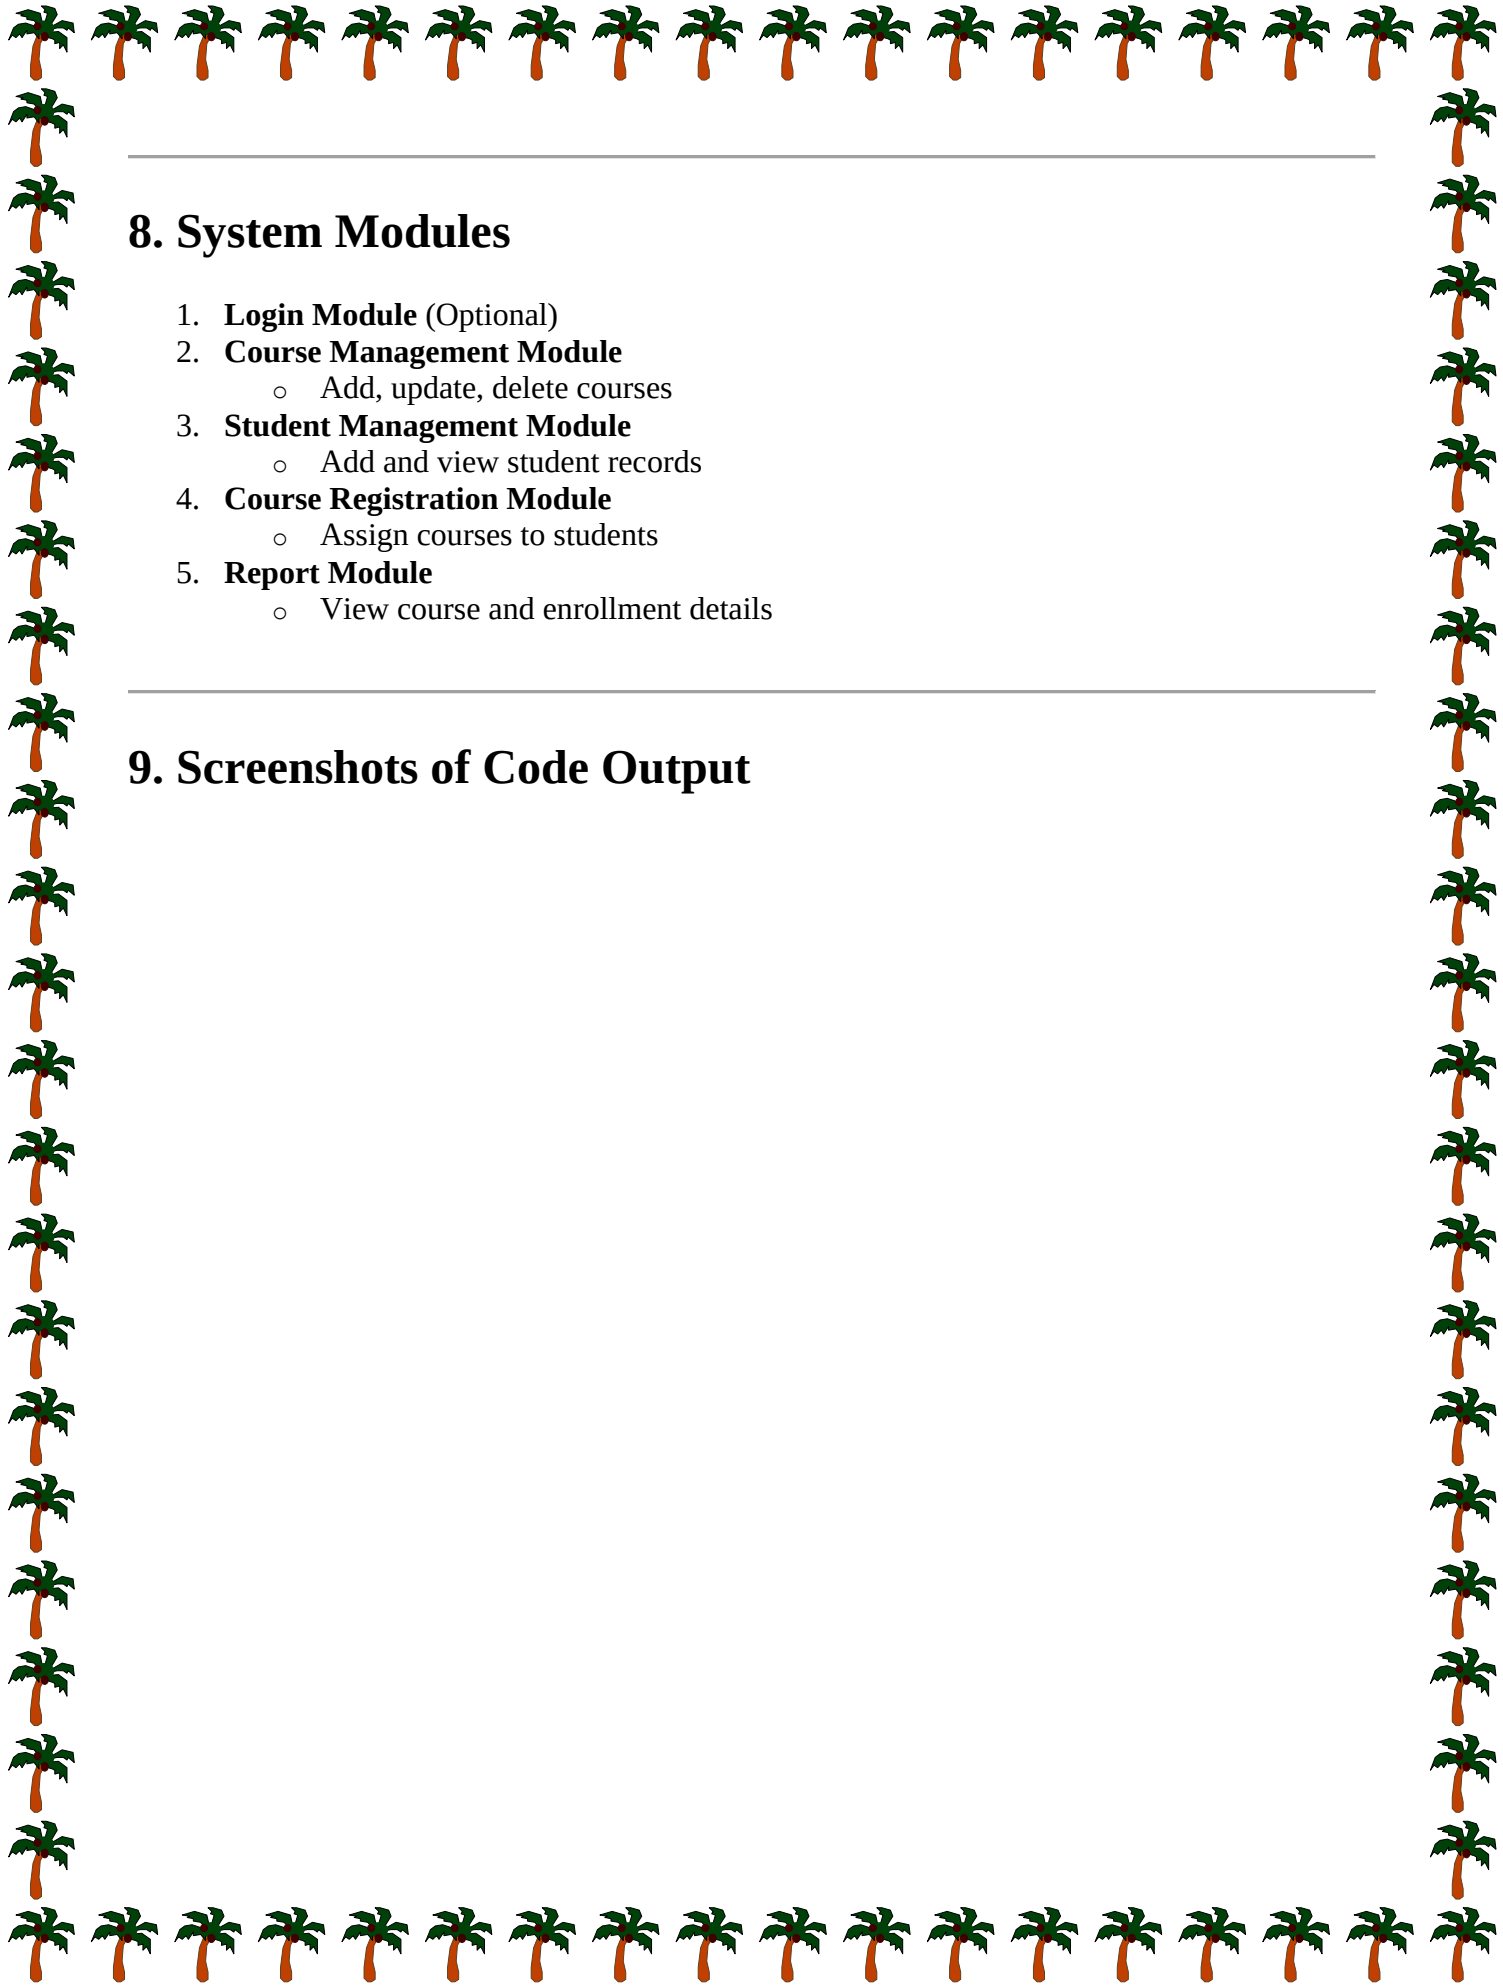

6. Non-Functional Requirements

The system should:

1. Be easy to use and user-friendly
 2. Provide quick response time
 3. Ensure data accuracy and consistency
 4. Be reliable and stable
 5. Require minimal hardware resources
 6. Allow future scalability
 7. Protect data from unauthorized access
-

7. Tools & Technologies Used

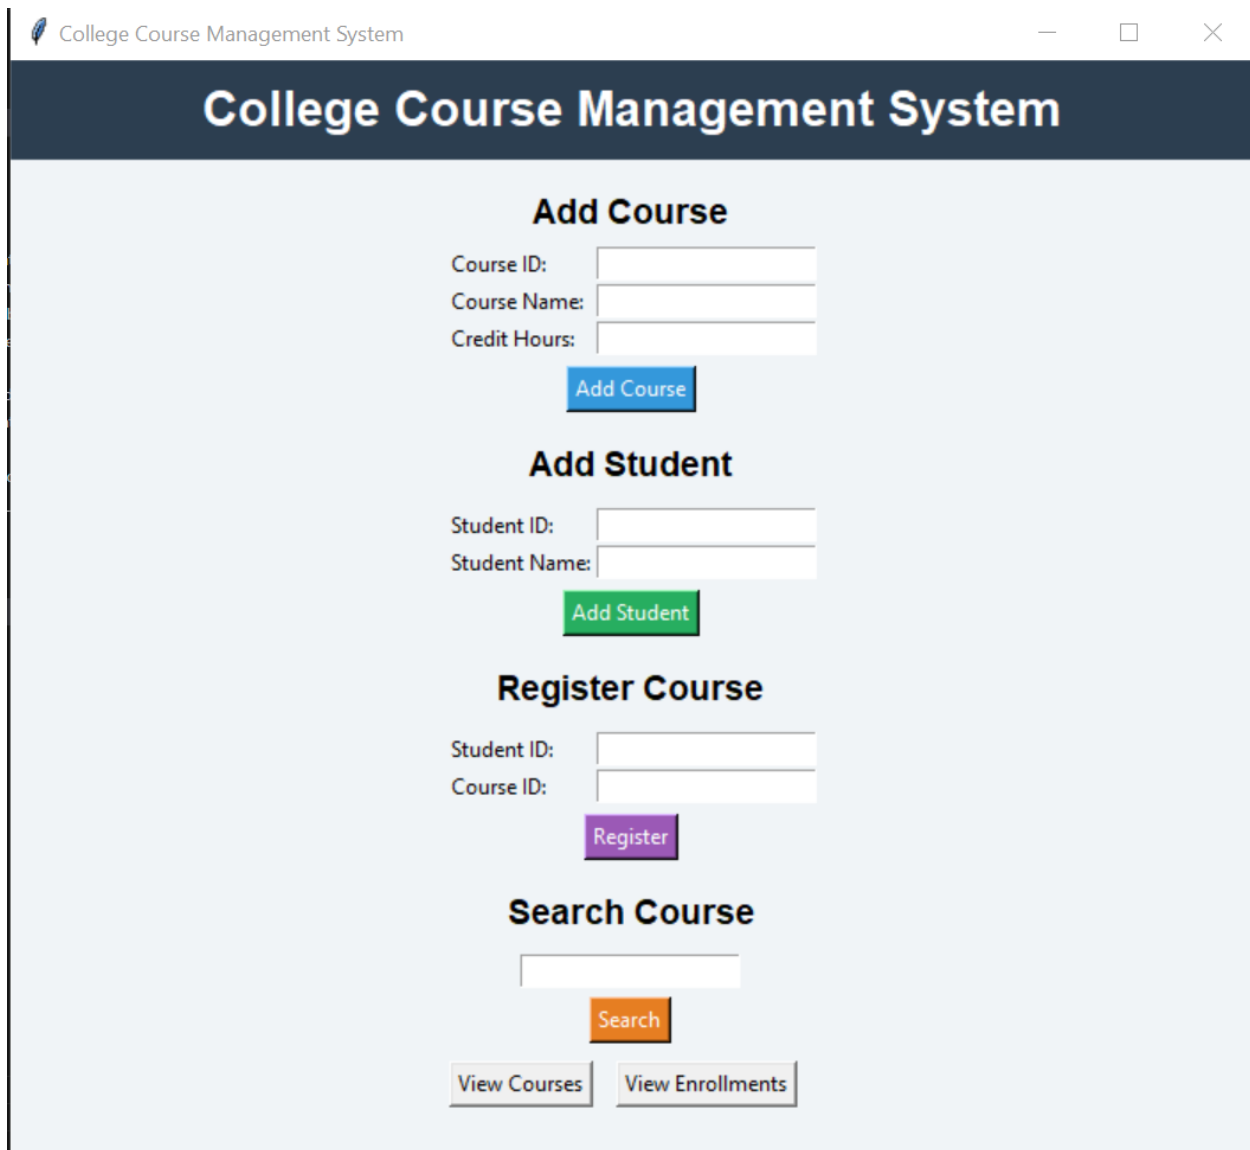

- **Programming Language:** Python
- **Database:** File Handling (Text files)
- **IDE:** Visual Studio Code
- **Operating System:** Windows

8. System Modules

1. **Login Module** (Optional)
 2. **Course Management Module**
 - Add, update, delete courses
 3. **Student Management Module**
 - Add and view student records
 4. **Course Registration Module**
 - Assign courses to students
 5. **Report Module**
 - View course and enrollment details
-

9. Screenshots of Code Output

A screenshot of a web application window titled "College Course Management System". The window has a dark blue header bar with the title in white. Below the header, the main content area is light blue and contains four sections: "Add Course", "Add Student", "Register Course", and "Search Course". Each section has input fields and a corresponding action button. The "Add Course" section has fields for "Course ID:", "Course Name:", and "Credit Hours:", followed by a blue "Add Course" button. The "Add Student" section has fields for "Student ID:" and "Student Name:", followed by a green "Add Student" button. The "Register Course" section has fields for "Student ID:" and "Course ID:", followed by a purple "Register" button. The "Search Course" section has a single input field followed by an orange "Search" button. At the bottom of the main content area, there are two buttons: "View Courses" and "View Enrollments". The window is framed by a decorative border of palm trees.

Register

Search Course

Search

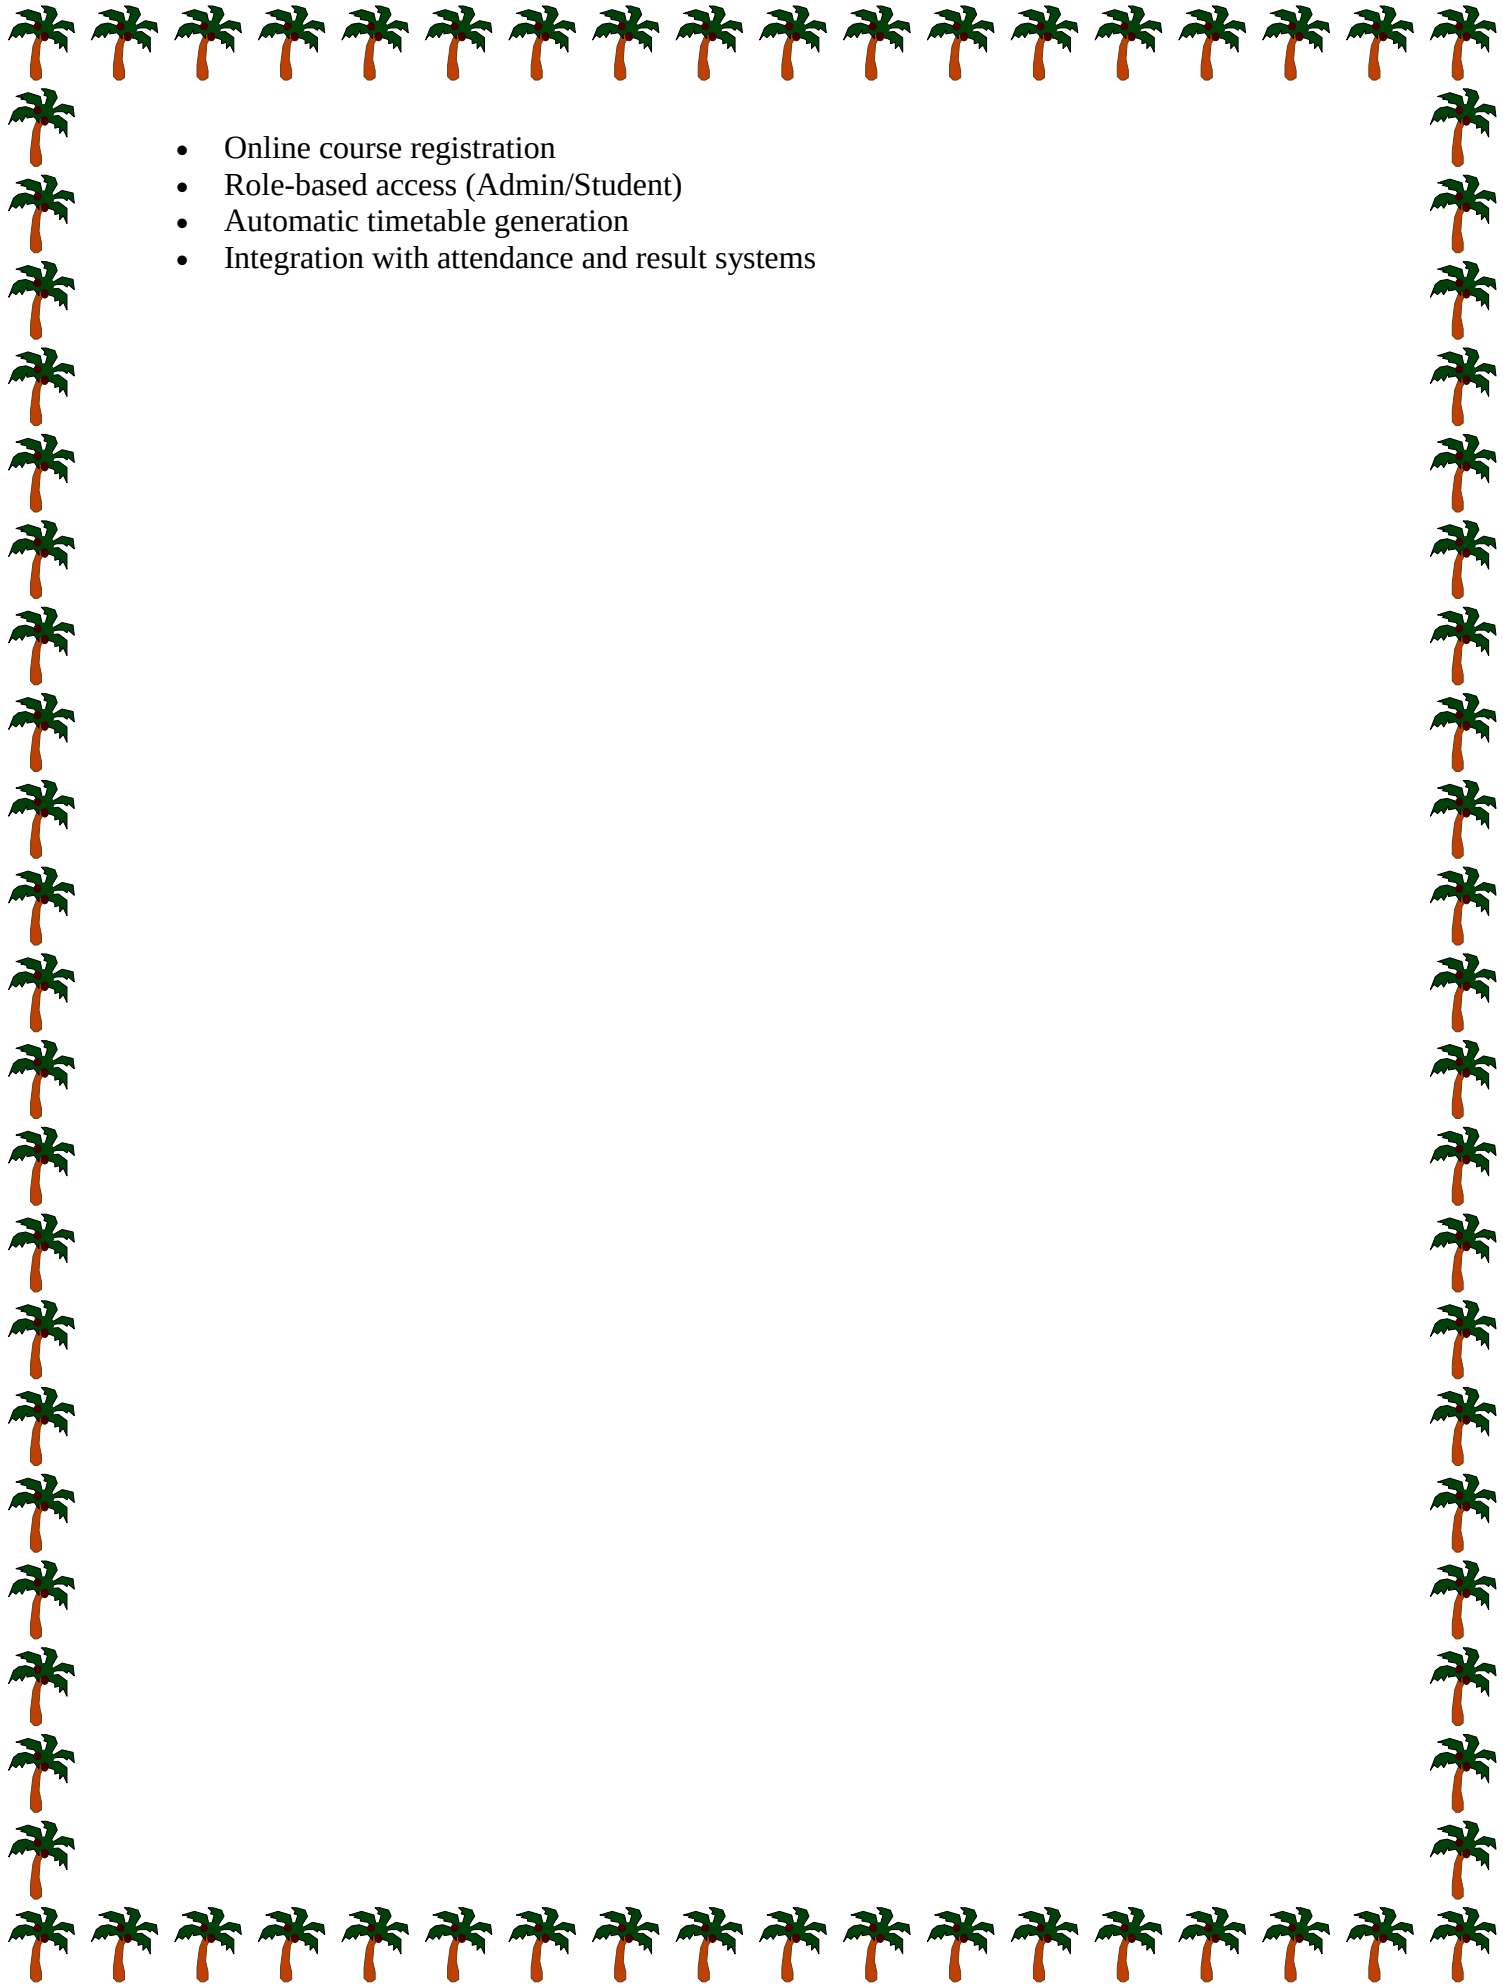

View Courses View Enrollments

10. Conclusion

The College Course Management System simplifies the management of courses and student enrollments in a college environment. It minimizes paperwork, reduces errors, and improves efficiency. This project helped in understanding basic programming concepts, database handling, and system design.

11. Future Enhancements

- Web-based system

- 
- Online course registration
 - Role-based access (Admin/Student)
 - Automatic timetable generation
 - Integration with attendance and result systems
